

US DEPARTMENT OF AGRICULTURE,

4379 people have signed a petition on Action Network telling you to NO to Genetic Engineering in Our Forests!.

Here is the petition they signed:

Dear USDA APHIS,

US researchers are seeking government approval to legalize the widespread release of unproven genetically engineered (GE) trees into forests. This would be a giant open-air experiment. The risks are huge.

If approved, these trees, GE American chestnuts, will spread their GE pollen and seeds freely. This would be the first-ever GE tree approved in the US, opening the floodgates to others.

It would also be the first-ever intentional release of a fertile genetically modified organism (GMO) into wild ecosystems, opening the door to other uncontrollable GMO releases.

American chestnut trees are also native to Ontario in Canada, and the range for chestnuts is projected to spread further into Eastern Canada as our climate changes.

For years, companies and researchers have sought approval to use GE trees in industrial timber plantations, but public opposition has stopped them. Now they are promoting this GE tree for “forest restoration” to try to win public approval of GE trees.

Engineers think they can (re)create nature in the lab, but wild American chestnuts, or any species, cannot be replaced by with GE facsimiles. This is not restoration, but dangerous experimentation.

This experiment would threaten wild American chestnuts with contamination from GE chestnut pollen. Decades of progress to restore wild American chestnut trees would be lost.

There are no long-term risk assessments of this scheme and scientists warn such assessments are not possible. American chestnuts can live hundreds of years and have deeply intertwined relationships with other trees, and with insects, songbirds and other wildlife.

In a violation of indigenous sovereignty, tribes and First Nations would have no ability to keep these GE trees out of their territories. Additionally, any town or county that has or wants “GMO-free” status would have the same problem.

Farmers who are growing organic and non-GMO chestnuts are also threatened. What happens if chestnut orchards are contaminated by GE chestnut pollen? Chestnut farmers could lose their livelihoods.

Forests are already threatened by unsustainable logging practices, invasive species and introduced pests and pathogens, urban sprawl, and the escalating impacts of climate change. We must solve the underlying causes of forest demise, not develop risky genetically engineered trees.

I join individuals and organizations across the world in demanding the rejection of this and all

genetically engineered trees. We cannot allow this kind of dangerous experimentation with our forests.

You can find detailed information about these threats in the white paper *Biotechnology for Forest Health? The Test Case of the Genetically Engineered American Chestnut*

Sincerely,___

You can view each petition signer and the comments they left you below.

Thank you,

Campaign to STOP GE Trees

21. H Lee (*ZIP code: 11010*)

22. Louise Kasl (*ZIP code: 48348*)

This has not been tested for nearly enough time and under the full conditions a multi decade growing tree needs. The risk to American forests is huge with an unknown ripple effect that could be economically and devastating. Nothing is known, or being said, about the impact on human and wildlife health, the health of our forests, or the rest of the ecosystem. So much of our planet is at risk right now and there have been many scientific studies proving GE problems.

Please do not allow this to happen for the short term benefit of large corporations. Think about the children!

23. Marnie Mills (*ZIP code: 86336*)

24. Lu Teixeira (*ZIP code: 33441*)

25. Alexandra Aponte (*ZIP code: 85730*)

Stop putting corporate interest and money over the planet. This is outrageous.

26. Miriana Demas (*ZIP code: 10128*)

27. Jessica Threat (*ZIP code: 92009*)

28. k weickhardt (*ZIP code: 72201*)

This is an irresponsible, risky, long-term experiment that has layers of variables and unknowns. A gmo chestnut should not be approved.

29. Randy Roderick (*ZIP code: 85730*)

30. Elaine Gardner (*ZIP code: 01602*)

31. Janet Weisberg (ZIP code: 34108)

NO GE Trees!!!!

32. Shirley Hoines (ZIP code: 57106)

To scary to not know what will happen to the other trees and forest, with these new GE things among them.

33. Michele Wolf (ZIP code: 33323)

I Oppose GE chestnut trees

34. Barbara Colombo (ZIP code: 80302)

35. Stephanie Brooks (ZIP code: 80304)

36. Eliza Walbridge (ZIP code: 19422)

GE plants have no place on our planet; the danger is too great and the unintended consequences unknown.

37. Amanda Roderick (ZIP code: 85715)

There is no plan(et) B

38. Alex Ramirez (ZIP code: 85715)

39. Laura Collins (ZIP code: 74105)

Why would any SANE person approve this??

40. JJ Mack (ZIP code: 97405)

41. tom saethre (ZIP code: 92354)

Please stop the GE- chest but. There is not enough research to warrant taking a big risk

42. Zvetelina Dar (ZIP code: 91316)

43. Kathryn Firmin (ZIP code: 70123)

44. Brett Andrzejewski (ZIP code: 14304)

45. B. Z. (ZIP code: 32569)

46. Kate Pierson (ZIP code: 91403)

Stop this madness NOW! Why are useless bureaucrats and mad corporate scientists who base their work on manipulated data allowed to run amok and f**k with nature? They want everything to be synthetic. Everything in nature is perfect AS IS. Leave it alone, you have no right or authority to do this. No good can come from it.

47. Jeannie Wayne (ZIP code: 32566)

NO! NO! NO! Please do not allow this GE tree to be disseminated into our forests. Americans have said over and over again that we do not want GE plants or animals in our environment. Most people have no idea that this being considered. Please do not allow it to happen.

48. Angela Dunning (ZIP code: HR6 0HN)

49. Global Justice Ecology Project (ZIP code: 14222)

50. Susan Broxham (ZIP code: 60124)

51. Lois Breault-Melican (ZIP code: 01562)

TACF's backcross breeding method is working, so why should we promote GE chestnuts?

52. Samuel Dodd (ZIP code: 46229)

53. Judith Osterman (ZIP code: 12759)

No GE trees!!!

54. Clare Rhodes (ZIP code: 95127)

55. Carol Bouldin (ZIP code: 92399)

56. Wu Joong (ZIP code: 37132)

No Gmo Landscape Contaminatined! Wu Joong.

112. Bev Varney (ZIP code: YO21 1SW)

113. Anima Chi (ZIP code: 32607)

There is no way to predict the impacts GE American chestnut trees will have on forests, wildlife, songbirds, soils or nearby communities.

114. Dannis Brown (ZIP code: 41216)

115. Angelo Fornaro (ZIP code: 74020)

116. Eva Novotny (ZIP code: CB4 3NG)

The project to release GM trees into forests is yet another case of profit motives overtaking due care to avoid foreseeable risks, let alone risks that our current lack of knowledge does not foresee. Thus it is reckless. The large scale of a forest. and the enormous difficulty of undoing any resulting damage (if indeed undoing is possible at all), makes it all the more imperative to prevent a looming disaster.

117. Kevin Coleman (ZIP code: OX15 6AQ)

Even though I live in the UK this threat affects us all. Any GE contaminated products coming to the UK from the US has the potential to cross pollinate with trees growing here. There is no such thing as perfect GE tech. Humans do not know what the consequences of the chemicals they use in agriculture when there are more than one used at any one time. The cocktail effect has never been tested so when they meddle like naughty little school kids with the basic genetic code of a living thing they have absolutely no idea what the potential consequences will be. It is the one technology that should be confined to a hermetically sealed laboratory along with the mad biotech scientists who practice this stupidity. They should never be let out into the real world. They present too much of a very real threat to the planets future integrity. We cannot allow that to happen ever.

118. Sally Glass (ZIP code: Ba5 3qx)

185. Orin Langelle (*ZIP code: 142222*)

One of the most logical arguments not to plant GE chestnuts is because there have been no long-term studies of GE trees because the life of trees can last hundreds of years. There is something called the Precautionary Principle. (The Precautionary Principle is a strategy to cope with possible risks where scientific understanding is yet incomplete, such as the risks of nano technology, genetically modified organisms and systemic insecticides. Source: United Nations Educational and Cultural Organization [UNESCO].) Over five decades ago Rachel Carson warned of the devastating impacts of the hundreds of new, unproven and ultimately dangerous chemicals entering the environment every year. Look what happened. I see no logical reason for doing something just because it was once there - and genetically engineered chestnuts never were there. A genetically engineered chestnut is not an American Chestnut.

236. Hazel Duell (*ZIP code: 2258*)

This experiment could have devastating side effects. Please do not do it.

237. Barbara Burns (*ZIP code: 95521*)

We do not need or want GE food, trees, plants, animals or anything! Energy and money should be spent of protecting the native species we already have on this planet. There used to be a perfect balance of all things natural, until humans f****d it up. #STOPGE

238. Melissa Hejazi (*ZIP code: 94515*)

239. Starr West (*ZIP code: 4888*)

240. Kevin Maher (*ZIP code: 12816*)

241. Bill Jordan (*ZIP code: 98238*)

Genetically engineered trees are not the answer. Soil tilth and the remediation of regenerative agriculture is the answer. It is time for the US Govt and the USDA to stand up to the evil companies that are trying to take over the world's food and seed supply and cut them off from all tax advantages. Organic growing of Heirloom species of trees, plants, fruits and vegetables is the only way our children are going to survive this century without mass extinction rearing its head.

Stop the insanity. The USDA is for protecting the civilian population in our country. It is not for promoting Frankenfoods and flora.

Thank you,
Bill Jordan

Please do not allow Genetically Engineered Trees to be part of our forest and our communities. The risks are unknown and possibly extremely serious.

Thank you.

635. Maureen Hilgeman (*ZIP code: 37419*)

636. Adam**The risks are so great that Koranyi** (*ZIP code: 07670*)

The risks are so great that it is only after century-long study and limited experimentation should GE trees be released into the environment.

637. lisa williams (*ZIP code: 32210*)

Why do we never learn from past experience? We need to keep studying this until we determine there are NO problems, period, with doing something like this. We do not need any other problems to plague our beautiful forests.

638. Helgaleena Healingline (*ZIP code: 53716-0121*)

639. John Livingston (*ZIP code: 96001*)

Please prevent any GE trees from being grown in our forests or private forests.

640. L. Bagley (*ZIP code: 87108*)

Genetic engineering must end before more damage is done to all living things!
This includes GE chestnut trees, that, we the public, strongly oppose!

641. Diane Beeny (*ZIP code: 07090*)

I am very concerned with ecology and natural bio-diversity and have done considerable research and study regarding the wider effects of releasing Genetically Engineered plants into the wild, and the impact that GMO s can have when they proliferate in natural environments.

GMO plants have some unfair advantages over native plants and may displace and even possibly eradicate the native flora. This may even cause some native plants to become rare or even become extinct.

If that happens, it can change the makeup of entire eco-systems. This may have a ripple effect, causing problems for the insects - including crucial pollinating insects -amphibians, birds, and other wildlife, who - if they are dependent upon upon those native plants for food and habitat - They may ALSO go extinct.

There is also the problem of possible release of pollen from these Genetically Engineered trees and plants and how they may interact and cause changes in other native plants and eco-systems.

The MAIN problem is the unpredictability of how GMO trees and plants may effect the wider bio-diversity and larger eco-systems.

This is still a highly experimental and untested process, and it may cause negative impacts that we cannot fully anticipate or predict.

And once an organism is released and gets propagated in the wild it is almost impossible to contain or fully control, and we cannot reliably know - and could possibly find out too late - what wider impacts may occur.

Genetically Engineered forests, in their basic nature and components, are ENTIRELY different from

bio-diverse native forests, and their ecological footprint and makeup are entirely different and how they interact and attract - or DON'T attract other species - is entirely different, too.

Once such an alteration occurs, and biodiversity is reduced, it may then become impossible to change it back.

And once any native plants, insects - including crucial pollinators - and other animal species go extinct then they are gone FOREVER.

These losses would be tragic, permanent and incalculable.

We need to fully consider if such permanent eco-system alterations and wider impacts are worth the risk.

In my opinion, they are NOT worth it.

I DO believe that it is MUCH better to "DO NO HARM" and to leave native forests and eco-systems ALONE!!

Mother Nature has a greater wisdom that Human hubris and arrogance can NEVER duplicate.

If we interfere with natural processes without fully understanding them, we do so at our own severe peril!!!

642. Barbara Blackwood (*ZIP code: 99206*)

643. Muyambi Ellady (*ZIP code: +256*)

Let us say no to genetically engineered trees. They are not needed in the US, Europe, Africa and or any other part of the globe.

Planting Genetically Engineered trees in a forest is an irreversible action. Please not do do something which could throw all of nature out of balance.

700. Maja Villumsen (*ZIP code: 09800*)

701. Sharon gooding (*ZIP code: ex36 4el*)

702. Andrew Dimoglou (*ZIP code: co58eq*)

703. Vesna Glavina (*ZIP code: 52556*)

There's nothing in man's history to suggest we're ready to play dice with the genetic blueprint for life on planet Earth. Someday, corporate influence over our regulatory agencies will be recognized for the total disaster it is. At that point, science will be permitted to assess the true costs of genetic engineering in our food system--with the option to shut down a failed experiment and start undoing the damage to the degree possible.

If we release these genetically engineered chestnuts into the wild, we will not have that same option--to shut down an experiment gone wrong. Please see this genetically engineered chestnut tree for what it is: a Trojan Horse intended to break the gates to allow all the other genetically engineered organisms awaiting approval for introduction into the wild. Please do the sane and honorable thing and protect our beleaguered environment--and future generations--from the greed-based insanity of our generation.

761. Theresa Church (*ZIP code: 14222*)

762. Kathleen Cato (*ZIP code: 31405*)

These are a few things that come to mind-

good intentions paved the path to hell

first, do no harm- the ethical base of medicine, but not science

hubris

unintended consequences

the thin edge of the wedge

Trojan horse

against the informed consent and will of the
US and Earth citizenry.

Precedence

Ethics? Wisdom? Far sightedness?

Who are the funders and larger benefactors? DARPA, Monsanto

Life will always win the arms race: antibiotic resistance, pesticide resistance, herbicide resistance,
spontaneous mutation and horizontal gene transfer.

Cross breeding is a time tested technology with at least a 5000 year history. In chestnut research it is making progress. Its outcomes are manageable. GM is faster, uncontrollable, and has a record of being used to drive disempowerment of farmers and amassing monopolistically derived power and profit.

We as a nation and a world are overwhelmingly against GMO species and are fought in our attempt to be informed of its presence in our lives.

While scientist may feel their motives are pure and in the best interest of a particular species, they cannot control the precedence they set nor the intent of those who can profit. The alteration of the whole biosphere is next.

This will be used to bring tyranny from the farms and plantations to the rest of the planet.

This opinion is radical- in a radical world undergoing radical redistribution of wealth and power on a dying planet driven by ignorance and greed. Scientist and powerbrokers, widen your lens from the micro to a macro vision of what is best for the whole of the planet. We are all sinking together. Wake up.

763. Robert Feller (*ZIP code: 04032*)

Enough is enough with the GMO bullshit, this madness has to stop.

764. Wendy Tico (*ZIP code: 94703*)

765. Maria Crossland (*ZIP code: 80305*)

This completely violates the Nuremberg Codes. It is an experiment that could make the situation they are trying to remedy worse. We need the symptoms to diagnose the root cause of the problem. We cannot genetically engineer the problem away. Just as when people get sick, when trees get sick there is typically an underlying imbalance in the ecosystem. Don't mess with the trees, rather clean up their environment and allow their surroundings to naturally rebalance. If you don't fix the underlying cause of dis-ease then no matter the genetics the trees will suffer.

766. Jen Gill (*ZIP code: 70601*)

767. Timothy Scerra (*ZIP code: 03275*)

My stand is No to GMOs !

768. Janet Newman (*ZIP code: 78735*)

769. Leah Akiki (*ZIP code: 30152*)

770. Fran Gorycki (*ZIP code: 19403*)

771. Stefanie Woywod (*ZIP code: 89144*)

Droughts/ floods

Cities submerged.

808. An anonymous signer (ZIP code: 95621)

809. Kimberly Rouse (ZIP code: 92103)

810. Max Riben (ZIP code: 18324)

GMO's have already demonstrated themselves to be unhealthy to the environment (contaminating and threatening nonGMO organisms) and the health of animals and people that eat them. Stop the insanity before the entire planet is irreversibly contaminated.

811. TIMOTHY LOCKHART (ZIP code: 72076)

BAN ALL GMO'S !

812. Klm Nogueira (ZIP code: 00831)

813. April Mackay (ZIP code: 80113)

814. John Friesner (ZIP code: 37872)

815. Wendy Morrow (ZIP code: 51031)

GMO should be illegal point blank. No life in our planet and universe should be able to become genetically modified especially if the modification puts heirloom or the original form at life at risk for mass extinction.

All original life forms should be protected.

816. Stephen Dorage (*ZIP code: 30030*)

Stop these GE experiments! Until there is better oversight and independent studies are conducted, we should not allow GE products into the natural world!

817. Bea Key (*ZIP code: 8032*)

818. richard shore (*ZIP code: 40502*)

we have a blight-resistant chestnut created by conventional back-crossing. we do not need a GMO tree.

819. Mary Bufkins (*ZIP code: 12831*)

820. Cristina Ramos (*ZIP code: 08822*)

821. Jillian Baker (*ZIP code: 37067*)

822. Buckie Jones (*ZIP code: 18840*)

823. Maria Hong (*ZIP code: 06880*)

Please block approval of the GE American chestnut tree because the trees could spread their GE pollen and seeds freely.

This would be a massive and irreversible experiment with our forests. It is completely unprecedented anywhere in the world. Never before has a GMO plant, especially a forest tree, been developed specifically to be released into wild nature to spread unchecked.

The unprecedented approval of these GE trees could open the floodgates to approval of other GE trees developed for industrial tree plantations.

824. Charles Godreau (*ZIP code: 13676*)

825. Amanda Wolter (*ZIP code: 49706*)

826. Barbara Savage (*ZIP code: 14624*)

Losing the American chestnut tree was a tragedy. We must not introduce an unknown quantity (genetically engineered 'replacement') into a living, breathing, interconnected biome. The results of this experiment cannot be recalled once being observed! This is NOT SCIENCE!

827. Ellen McCann (*ZIP code: 92027-1401*)

828. Sheryl Miller (*ZIP code: 55316*)

829. Irina Bilyk (*ZIP code: 98604*)

831. L Byr (*ZIP code: 65102*)

832. Elizabeth Hess (*ZIP code: 07675*)

There is no way to predict the impacts GE American chestnut trees will have on forests, wildlife, songbirds, soils or nearby communities.

833. J.a. Blahnik (*ZIP code: 54401*)

834. Sue Klare (*ZIP code: 53818*)

835. Jennifer Berman Diaz (*ZIP code: M5A 4T1*)

836. Lizbeth Rowland (*ZIP code: 60005*)

837. Laurence Faulks (*ZIP code: 92240*)

This experiment may work, and it might not. The danger is that these “super-trees” could easily cause the same kinds problems that kudzu causes with its rampant growth. Once released out in the wild, there’s no way to turn the clock back.

838. Carol Valentine (*ZIP code: 97538*)

839. Gary Kenny (*ZIP code: N0G2M0*)

840. Daniela Ruegg (*ZIP code: 4570*)

GE trees released in the wild can be expected to have serious consequences specially in trees that live hundreds of years. I don't understand why do plants, trees, fruit , vegetables, animal and humans need be genetically engineered. Let Nature do what it does best without moronic scientists who thinks that they can better NATURE. What a folly !!

841. allan grote (*ZIP code: CT9 3ES*)

842. Mark Hathaway (*ZIP code: M4C1W2*)

843. S Cooke (*ZIP code: SE11 4SU*)

844. Jeffrey Davies (*ZIP code: Sa11 2at*)

No

845. Paul Wartman (*ZIP code: N0G2M0*)

I am a native and nut tree nursery grower and there are many efforts outside of genetic modification that are doing fantastic work. We do not need the risks associated with GE trees (or any crops).

846. ilana Vanderweit (*ZIP code: N0G 2M0*)

847. JEAN BROOM (ZIP code: HU15 2EJ)

848. Costa Boutsikaris (ZIP code: 10960)

It will never be safe to release GMOs into the wild. Do not allow this to happen.

849. Jeanette Baker (ZIP code: 60034)

We need to remember the lessons of the past, when we have planted kudzu to solve erosion issues, or released invasive's to compat another invasive.

Look at issues with modified mono culture plants.

We do not know enough what the long term effects will be.

Forests are already threatened by unsustainable logging practices, invasive species and introduced pests and pathogens, urban sprawl, and the escalating impacts of climate change. We must solve the underlying causes of forest demise, not develop risky and unproven genetically engineered trees!

Jeanette Baker

956. Cheryl Reid (ZIP code: 3216)

Just stop this foolishness!

Leave Nature to do what Nature does best!

957. Leslie Lihou (ZIP code: 95407)

We do not know what damage GM trees might cause, especially if commercialized by corporations that are mandated to create profit. Once introduced into the wild, either accidentally by drift or on purpose, the process is impossible to undo. Existing GM eucalyptus plantations are creating fire storm hazards and draining aquifers. Scientists admit that GM trees are likely to dominate ecosystems and produce homogeneous cultures. This does not presage well for more introduction of GM trees. Now with climate crisis we need biodiversity, the adaptability that biodiversity provides.

958. Wendy Riegelman (ZIP code: 83113)

959. Harrie Baken (ZIP code: 5044 NK)

960. Tanja Pasini (ZIP code: 20207)

1032. Esther Neville (ZIP code: 11941)

I agree 100%. Many of our problems we had had during normalcy have been laid bare, we can not afford to ignore them anymore. Through a horrific event we are now being given the opportunity to change the selfish, always for profit and at the risk of human lives and the environment...ways. We can always make money in more environmentally sound businesses. They can work together. Everyone needs to support themselves, let's just put some selflessness and ethos back into the mix. We are given life on this earth, in order to sustain it we have to give back to it. I would like my children and any future generations to have the same experience and opportunities that past generations have enjoyed. Luckily for me my parents lived through many hard times, and taught me to respect the earth and that we are just borrowing it while we are here. My father in particular made it known through his actions that we are stewards of what God has so graciously given us. We have been entrusted with

such an amazing gift, and our lives depend on it's survival. I am shocked that people cannot understand or care about such an important issue. We need to make it an integral part of our daily life.

1033. Andi Bonge (*ZIP code: 66216*)

1710. Barbara Lasley (*ZIP code: 80247*)

1711. Tracy Marinello (ZIP code: 32640)

We must stop trying to control and manage mother nature. please do not allow Genetically Engineered trees to be planted.

1712. Daniela Thiel (ZIP code: 40789)

1713. Jean Chagnon (ZIP code: 10001)

1714. Namiko Hart (ZIP code: 02557-3336)

this threatens the entire eco system & must be stopped, we have already seen what GMO crops have done to farming....STOP THE INSANITY of MONSANTO!!!!

1715. Marla McFadin (ZIP code: 97405)

What is wrong with you?

1716. Lila Henry (ZIP code: 93420)

Forests are complex entities that support life on the planet. It goes far beyond only supplying oxygen. Please read "The Hidden Life of Trees" to get a glimpse into their multiplicity of purpose. Everything from roots to understory to canopy are important to life. Humans are only beginning to understand it. It would be disastrous for us to continue in our arrogance and greed by introducing GMO trees into the forest. Please reject the proposal.

1717. Matt Erb (ZIP code: 15201)

1718. Erick Cerritos (ZIP code: 78211)

1719. Demetrio Papadopulos (ZIP code: 96041)

Stop all GMO

1720. Gayl Lick (ZIP code: 54456)

1721. Jaime García (ZIP code:)

1722. Michele Pedrini (ZIP code: 91007)

1723. Russell Henderson (ZIP code: 31907)

1724. Genevra Case (ZIP code: 28173)

1725. Becky Claborn (ZIP code: 92122-2431)

1726. Jill Scott (ZIP code:)

1727. Mandy Grey (ZIP code: sy256jy)

1728. Christine Porrello (ZIP code: 06488)

1729. Linda A Espino (ZIP code: 92101)

Why is it that one horrible idea after another with Genetic engineering is threatening our world. Why would anyone in their right, ethical mind release GE American Chestnuts into forests? Stop this now.

1730. Mary Higgins (ZIP code: 98043)

1731. Karen Layfield (ZIP code: 97540)

1732. Carol Payne (ZIP code: 99141)

Just stop this dangerous stuff NOW! Don't do these things you can never undo once you realize they are so damaging to nature!! You are destroying the web of life!!

1733. Marshall Hudson-Knapp (ZIP code: 05201)

1734. Elizabeth Neuse (ZIP code: 06517)

1890. Amanda Slade (*ZIP code: 40383*)

1891. Gladys Truoccolo (*ZIP code: 18346*)
none of this nonsense and not in the USA

1892. Laretta Haffner (*ZIP code: 49071*)

1893. Mary Murphy (*ZIP code: 97702*)
We cannot & should not alter our world. Humans want to control everything and then later try to clean up their mistakes. Some mistakes are irreparable. Stop!

1894. Victoria Osborn (*ZIP code: 76087*)

1895. Rosalyn Iannelli (ZIP code: 00909)

1896. Barbara Hudson (ZIP code: 08330)

Absolutely no GE trees leave nature alone

1897. Steven Hursh (ZIP code: 95376)

Love to see more info on the issue at hand.

1898. Kimberly SvenBrown (ZIP code: 93105)

1899. Lorri Cook (ZIP code: 38666)

Stop experimentation on irreplaceable wilderness!

1900. Roger James (ZIP code: 95446)

I am in the USA

1901. J Wattsonowski (ZIP code: 61755)

1902. Bennett Neuhauser (ZIP code: 60506)

Our government must crack down hard on GE organisms of all kinds, and allowing GE trees in wild forests would be reckless insanity.

1903. Debbie Carlson-Gould (ZIP code: 98012)

1904. Mick Johnston (ZIP code: 71913)

"NO" GE AMERICAN CHESTNUT

1905. Melissa Caldrone (ZIP code: 48601)

1906. Rafael Johnson (ZIP code: 55317)

1907. Sandy Sparacino (ZIP code: 75169)

Really? Is our government going to sell out like this again? NO reason to do this, none! We are just getting back our Chestnut trees here in the U.S. after losing them to blight many years ago. It is becoming an industry here again! A lot of work has gone into this. WHY would they do this? Its pathetic. Any politician going for GE/GMO trees and food crops are not looking out for the U.S. people or this country. Vote those guys out!

1908. Maria Thompson (ZIP code: 65326)

1909. Lyn Halama (ZIP code: 64052)

1910. I gols (ZIP code: 01760)

1911. Mimi Hugh (ZIP code: 97086)
NO!!

1912. Heike Delaney (ZIP code: 52803)

1913. Chris Denney (ZIP code: 08080)

1914. Judy Santos (ZIP code: 33603)

1915. Jennifer Teichert (ZIP code: 53151)

Stop with the GMOs already!! You have no idea what impacts this will have. Birds are already dying from your poison GMO seeds. Enough!

1916. Bev Bacon (ZIP code: 49508)

1917. Nancy Parker (ZIP code: 63011-3577)

No more genetically modified anything!

1918. martha lynne (ZIP code: 85713)

So how do you KNOW this experimental tree won't change the wild ecosystem you propose to plant it? What testing have you done? The stakes of life in these forests are too high to allow a permanent potential environmental disaster. And you DON'T KNOW you don't have one here. Real American Chestnuts can be restored to ecosystems. It is much slower, but doesn't come with Pandora's crackerjack prize in the bottom of the box. Won't stand for this!

1919. Theresa Mosher (ZIP code: 12304)

We are smarter than this.

1920. jennifer greer (ZIP code: 33579)

1921. Laura McDonald (ZIP code: 32233)

Leave Mother Nature alone! There is NO NEED to alter our ecosystem with your chemicals! The animals do not consent for you to alter their food!!!

1922. Michelle Mallen (ZIP code: 64503)

1923. Judith Antonelli (ZIP code: 07843)

1924. Kim Seiler (ZIP code: 32127)

1925. Sayo Iseri (ZIP code: 95628)

No GE trees

1926. Karen Roberts (ZIP code: 54151)

Stop messing with Mother Nature! No more GE anything! Just STOP!

1927. Jill Thomas (*ZIP code: 48346*)

1928. Diana Carey (*ZIP code: 90406*)

Nature has the only license to evolve and change it's DNA...with its' innate. intelligence. It is very Dangerous, irreversible and irresponsible to play the mad Scientist who is going to save the world. There are more appropriate and unarmful options to regenerate the soil, plants, trees and forests. Let life lead itself instead of using technology that will have dire consequences.

1929. Aimie Foster (*ZIP code: 93912*)

1930. Shannon Anderson (*ZIP code: 16421*)

1931. Jaclyn Miller (*ZIP code: 02186*)

1932. Brenda MacInnes (*ZIP code: 33843*)

This is sick
Why can't scientists just leave nature alone

1933. Christine Rowe (*ZIP code: 17019*)

1934. Lisa Ladd-kidder (*ZIP code: 19530*)

1935. Harv Gamble (*ZIP code: N0H 2T0*)

Enough already. This madness has to stop. Instead of creating gmo species lets focus on protecting the natural native species. This is pure foolish!

1936. Trina Orbison (*ZIP code: 36856*)

Reject the Trees!!!

1937. Heidi Gevaart (*ZIP code: 98296*)

We have enough scientific proof that GE is not conducive to a healthy and sustainable environment. We have enough wrongs we have done to this planet and to continue and allow such actions is criminal.

1938. Patti Gibson (*ZIP code: 06498*)

STOP RUINING OUR PLANET NOW!!

1939. Susan Sweeney (*ZIP code: 06902*)

1940. Laurel Hughes (*ZIP code: 02458*)

GMOs MUST BE STOPPED IN THEIR TRACKS! They threaten all that is native and pure!

1941. Sheila Thiele (*ZIP code: 38611*)

1942. B. coniglio (*ZIP code: 02215*)

1943. Bob Stanek (*ZIP code: 54017*)

1944. Ann Wilson (*ZIP code: 69361*)

Forests have survived without genetic modification for centuries this is NOT what the world needs!

1945. Jordan Ballard (*ZIP code: 33545*)

1946. Linda Woodbury (*ZIP code: V8v 3E1*)

If we try to "play God" and mess with Mother Nature, she will destroy us. We do not have the intelligence to understand nature's intricate and precise harmony and balance. This cannot go ahead.

1947. Kathy Ruopp (*ZIP code: 60643*)

The release of GE American Chestnuts into forests would be a massive and irreversible experiment. GE is an untested and unpredictable procedure that cannot be stopped once set loose in nature. This is a threat to American forests and the future of our environment. Please Stop It. This Is Crazy.

1948. Kevin Watson (*ZIP code: 61107*)

Why?

1949. Mollie Yates (*ZIP code: 39560*)

1950. Cathleen Trimmer (*ZIP code: 27513*)

1951. Nancy Gushue (*ZIP code: 45742*)

I am totally against unleashing genetic experiments into our world. The short- and long-term outcomes can be easily perceived with disastrous ends, yet you knuckleheads try to profit no matter what the cost; because you think it won't cost You. You need mental help.

Once GE Chestnut trees are released into the environment, there is no turning back. Pollen from these trees will pollinate wild trees, and in short order (on the timescale as measured by tree lifespans) there will no longer be any true American Chestnuts left. This is a crime of evolutionary theft, and must not be permitted.

In addition, Indigenous Americans have not given their approval of this and they have the most at stake. With 10,000 years of cultural evolution within the forests that included the American Chestnut, theirs should be the ultimate word in this determination.

I oppose the proposed approval of genetically engineered forest trees in the United States, and urge the USDA to deny the petition from the SUNY College of Environmental Science and Forestry (ESF) to approve the genetically engineered Blight-Resistant Darling 58 (D58) American Chestnut.

The project to genetically engineer American chestnut trees has oversimplified the science and certainty involved in engineering pathogen resistance. The research on the D58 American chestnut has occurred against a backdrop of efforts by many other researchers to genetically engineer agricultural crop plants to be resistant to viral, bacterial and fungal pathogens. However, successful engineering of pathogen resistance has been remarkably elusive.

A single gene construct, the oxalate oxidase enzyme (OxO) from wheat, is unlikely to be effective on its own in conferring durable blight resistance. One frequent problem is that engineering resistance to one pathogen, often leaves plants more susceptible to other pathogens or stresses, or reduces plant growth significantly. Another problem is the loss of pathogen resistance over time. A modification that may initially be effective can be rendered ineffective as the pathogen adapts. Given such limited success with commonly cultivated and short-lived domestic crop plants, the prospects for successful and durable engineering of fungal pathogen resistance into a long-lived wild forest tree species appear remote.

We do not know how genetically engineered trees might behave in the diverse and changing context of natural forests over long periods of time, nor will we know even after they are released. This poses many significant impacts and risks to our native forest ecosystems.

I strongly urge the USDA to reject this application.

There are plenty of native species for reforestation. Forests are already compromised in so many ways. This seems to be science for the sake of it. As someone who has been involved in restoration projects in the past, I have witnessed specious proposals implemented in ill-advised ways that were, bottom line, simply motivated by grant chasing. And were ultimately counter productive. This one seems to be potentially disastrous.

The real test will be the environment's ability to work the GE American Chestnut trees into our environment while keeping our environment human habitable at the same time our biodiversity that helps keep our environment human habitable is in free fall and our seasons are increasingly irregular and out of sync with the life cycles of our food crops and other food sources etc.

By the way, who will own the genetically altered trees? The companies that own the patents involved or the landowner where the trees sprout up willy nilly and grown?

Roundup ready crops haven't lived up to their promise of all up side and no down side, and the ratcheting up to dicamba has, if anything, made matters worse.

Haven't genetically modified mosquitoes been recently introduced into the environment? Let's at least see how that turns out over at least the next couple of years. And get a handle on the Roundup/dicamba problem as well.

What's next, GMO children genetically modified to survive in a GMO world born owning all the GMO patent holders more than they'll ever be able to pay off?

Without specific studies on the long-term effects of introducing genetically modified species into an environment it would be too risky to plant such in a non-controlled area. The dangers could be irreversible harming the delicate balance of nature more so than permitting a species to succumb to natural causes. While it is not good when species become extinct, such is, sadly, the course of things at times. It is a fact that the environment has been harmed throughout the ages, primarily by the unwise stewardship of mankind. Now that we have become aware of the adverse effects and conditions of unsavoury and unwise human influence, let science do all to safeguard that which is natural by closely and thoroughly studying potential alterations to flora prior to introducing another man-made change. It is the duty of science to control that which it studies in order to learn the most from the individual circumstance (and/or species) from which knowledge is sought. Environmental science is the broad study of things extant. Fellow researchers have the duty to leave the introduction of new species up to those within the field of Environmental Science. Allow those with a broad understanding of environmental impacts of the introduction of non-native species to first come along side and study this man-made species before subjecting nature to its long-term impositions.

Releasing a GE American Chestnut into the wild is grossly negligent at a time when we already know what harmful effect (toxic side effects, uncontrollable spread, forever consequences) other GE organisms have, but do not know anything yet about this particular tree and the effect on the habitats. Comparable to invasive species, this GE Tree would first spread unnoticed, and when the expansion is finally noticed, it will be too late to control. We have enough shifts in our "natural" environment due to a warming climate, we do absolutely not need a GE shift on top of it all.

2359. Edward Groh (*ZIP code: 21090*)

2360. Terrance Hutchinson (*ZIP code: 93505-2226*)
Please no ge trees!

Do not release GE American Chestnuts. We do not want first-ever genetically modified organism (GMO) designed to spread into ecosystems, opening the floodgates to other GE trees.

2367. Jason Young (ZIP code: 04614)

You cannot fix a problem that started with an ax with another ax. Pollen analysis of lake sediment reveals chestnut was not nearly as prevalent before colonial deforestation as it was after. European ax brought nearly mono crop chestnut coppice throughout. Blight had a field day with half the trees, we cut the other half down. News of blight traveled faster than the blight itself and many healthy trees were felled. Often, once a stand was seen to be infected.. a few trees infected.. the whole stand was cut. Such was the fate of East Rock in New Haven, CT. Blight imported to Old Lyme on Nursery stock in 1876... A hundred years later we have "Lyme disease" named for the place it was first found. Coincidence? Consequence of unhealthy forests. Control deer population and watch Lyme disease subside as well as the chestnuts grow back. Keep chestnut wild. GE aims to grow trees designed to be cut down and processed by an entirely fossil fuel subsidized operation. GE crisper is a micro-ax. Rather than "fix" the problem that started with the ax in the first place, it will only chop another misguided blow to the species. Re-wild the chestnut. Do not allow syngenta and Monsanto to propogate Powell, Maynard and SUNY's engineered Trees. Do not allow industry to un-wild Eastern Forest. Take heed the lore of the Lorax.

Genetically modified organisms should be studied during the entire life span of the target species. Otherwise, you don't really know what you are doing.

2373. Karl Koessel (ZIP code: 95519)

I oppose the proposed approval of genetically engineered forest trees in the United States, and urge the USDA to deny the petition from the SUNY College of Environmental Science and Forestry (ESF) to approve the genetically engineered Blight-Resistant Darling 58 (D58) American Chestnut.

The project to genetically engineer American chestnut trees has oversimplified the science and certainty involved in engineering pathogen resistance. The research on the D58 American chestnut has occurred against a backdrop of efforts by many other researchers to genetically engineer agricultural crop plants to be resistant to viral, bacterial and fungal pathogens. However, successful engineering of pathogen resistance has been remarkably elusive.

A single gene construct, the oxalate oxidase enzyme (OxO) from wheat, is unlikely to be effective on its own in conferring durable blight resistance. One frequent problem is that engineering resistance to one pathogen, often leaves plants more susceptible to other pathogens or stresses, or reduces plant growth significantly. Another problem is the loss of pathogen resistance over time. A modification that may initially be effective can be rendered ineffective as the pathogen adapts. Given such limited

success with commonly cultivated and short-lived domestic crop plants, the prospects for successful and durable engineering of fungal pathogen resistance into a long-lived wild forest tree species appear remote.

We do not know how genetically engineered trees might behave in the diverse and changing context of natural forests over long periods of time, nor will we know even after they are released. This poses many significant impacts and risks to our native forest ecosystems.

I strongly urge the USDA to reject this application.

Thank you for your attention to my opinion.

Sincerely,

Karl Koessel

2374. Jennifer Skinder (*ZIP code: 05602*)

2375. Maryetta Brown (*ZIP code: 22712*)

I oppose the proposed approval of genetically engineered forest trees in the United States, and urge the USDA to deny the petition from the SUNY College of Environmental Science and Forestry (ESF) to approve the genetically engineered Blight-Resistant Darling 58 (D58) American Chestnut.

The genetically engineered American chestnut submitted for review uses an oxalate oxidase enzyme (OxO) from wheat that appears to limit, but not destroy, the spread of chestnut blight (*Cryphonectria parasitica*) on juvenile American chestnut trees. While the OxO enzymes appear to be non-toxic, all relied-upon testing regarding the D58 trees is insufficient, at best.

All D58 testing was executed within a very short timeframe and was done on young trees, less than 5 years old, and do not reflect the pre-blight lifespan of the wild American chestnut. For example, young trees are known to be more resistant to blight. And American chestnut trees can live for well over 200 years and face fluctuating environmental conditions over their lifespans-drought, flood, heat, pests and the basic changes associated with aging. All these factors could influence how genes are expressed over time and whether or not the trees will retain blight resistance and withstand other challenges. We cannot rely on extrapolation from test results from young trees to assume that blight resistance will be functional over a longer period and under the variable conditions of natural forests. It would be irresponsible to release this genetically engineered tree into the wild without even knowing if they will have the same long lifespan of their wild American chestnut counterparts.

There is simply no way to know if the OxO enzyme will remain safe and effective over time, posing a serious environmental threat to forest ecosystems and wildlife that cannot be prevented. The cumulative impacts from introducing this organism have not been thoroughly considered and I strongly urge the USDA to reject this application.

I oppose the proposed approval of genetically engineered forest trees in the United States, and urge the USDA to deny the petition from the SUNY College of Environmental Science and Forestry (ESF) to approve the genetically engineered Blight-Resistant Darling 58 (D58) American Chestnut.

The genetically engineered American chestnut submitted for review uses an oxalate oxidase enzyme (OxO) from wheat that appears to limit, but not destroy, the spread of chestnut blight (*Cryphonectria parasitica*) on juvenile American chestnut trees. While the OxO enzymes appear to be non-toxic, all relied-upon testing regarding the D58 trees is insufficient, at best.

All D58 testing was executed within a very short timeframe and was done on young trees, less than 5 years old, and do not reflect the pre-blight lifespan of the wild American chestnut. For example, young trees are known to be more resistant to blight. And American chestnut trees can live for well over 200 years and face fluctuating environmental conditions over their lifespans-drought, flood, heat, pests and the basic changes associated with aging. All these factors could influence how genes are expressed over time and whether or not the trees will retain blight resistance and withstand other challenges. We cannot rely on extrapolation from test results from young trees to assume that blight resistance will be functional over a longer period and under the variable conditions of natural forests. It would be irresponsible to release this genetically engineered tree into the wild without even knowing if they will have the same long lifespan of their wild American chestnut counterparts.

There is simply no way to know if the OxO enzyme will remain safe and effective over time, posing a serious environmental threat to forest ecosystems and wildlife that cannot be prevented. The cumulative impacts from introducing this organism have not been thoroughly considered and I strongly urge the USDA to reject this application.

GM is scientifically proven to be dangerous and impossible to reverse once released into the environment. Traditional breeding can result in equally useful traits. It is expensive and unnecessary technology.

2555. Waclaw Swiecicki (*ZIP code: 01-056*)

Consider what we have now:

The functions of forests are limited to the production of wood, and recently their climate protection function (carbon sequestration in the soil), which is not possible without the coexistence of pollinating insects in the forest maintaining biodiversity, is being rediscovered.

There is a lack of research into the effects of genetic engineering and gene editing on the soil environment. Until now, all global serious climate protection programs did not take into account the protection of soil, its microbiome to maintain its hydrological and climatic functions. And the role of pollinating insects in the protection of soil and its many, many functions has certainly been neglected even more. The discussion of whether to let GE Trees into the forest is a bathwater problem overflow. (pouring out the baby with the bathwater). Because do GE forests retain water or are they creating a new dry reality? We were able to see how dry and susceptible to fires the forests in Spain (GE eucalyptus?) Were last year. We must start by loving the soil life while we are alive.

Silence in our culture is an expression of acceptance, but tornadoes, hurricanes and floods are also nature's disapproval of our actions.

The US Department Of Agriculture (USDA) must not approve a massive, irreversible experiment with unforeseeable consequences for decades or possibly even centuries.

The USDA must reject genetically engineered (GE) trees.

The release of GE American chestnut trees into the wild, if approved by the US government, would set many dangerous precedents, with no long-term risk assessments. Our government needs to protect our environment by not allowing dangerous tampering with the genetic makeup of American trees. Therefore, the Department of Agriculture must act responsibly and reject this dangerous experiment with our forests by not approving forest trees for unrestricted planting in North America. Allowing this would have many dire consequences and would be the first-ever genetically modified organism (GMO) designed to spread into ecosystems. This would result in opening the floodgates to other genetically engineered (GE) trees.

Scientific evidence has indicated that for the health of the environment wild trees must not be replaced by GE facsimiles. Wild trees live many years and have deeply supportive and intertwined relationships with other trees, insects, songbirds and wildlife. Tragically, this experiment also threatens to contaminate the wild American chestnuts that still grow in the forests. Wild American chestnuts could be lost forever.

2570. Gayle Janzen (ZIP code: 98133)

GM trees are totally unproven. You have no idea what kind of havoc they could reap on our environment. Please, for the love of God, don't unleash any GM trees into our forests. We should be spending time and energy on protecting our wild trees and making their environment healthier, not creating an unknown future. Unless you have done long-term studies proving that GM trees are totally safe, you have absolutely no business unleashing them into the environment.

2771. Cie Simurro (*ZIP code: 01338*)

If you want the real story, read Overstory.

2772. Sam Inabinet (*ZIP code: 23464*)

Your actions and inactions regarding this and all related concerns have been, are being and will be remembered by all of us who will live in the world that you are shaping with your decisions right now, in addition to being a matter of public record. We are all on it together. Environmental emergencies affect everybody's health and livelihood, and will do so for generations to come. All other issues need to be considered as facets of the critical state of the biosphere.

Given the consistency with which this administration and its predecessors have managed to weaponize each current and foreseeable crisis against the vulnerable majority of the population of the United States of America, and the exceptional leniency and overwhelming subsidization of any industry which creates and perpetuates such crises, any failure to directly address and act upon these issues can only be seen as complicity in a clearly genocidal agenda.

2804. Joan Klayton (ZIP code: 07748)

2805. Karin Ascot (ZIP code: 78704)

Releasing genetically altered plants uncontrolled into our forests is a TERRIBLE idea. DO NOT ALLOW RELEASE OF GENETICALLY MODIFIED ORGANISMS!! Scientists have no real idea of what could happen. Existing species evolved within the context of millions of other species in proximity to them, and each one is suited to its habitat. There is no way to predict exactly what could happen if GMOs are released in an uncontrolled fashion. Such chestnuts could poison squirrels, causing raptors to go hungry, as one of dozens of terrible scenarios. DON'T DO IT! We humans have NO right to unleash our own inadequate creations upon the planet. Just say NO.

2806. Gene Ulmer (ZIP code: 84121)

2807. Amy Platt (ZIP code: 98011)

2808. Judith Bohne (ZIP code: 19567)

Once the genie is out of the bottle it will be impossible to recall it. It will be like the Florida everglades and the snakes that are devouring ALL the native wildlife. It will be a self-inflicted invasive species.

Leave nature alone.

2906. Mariasol Johannes (*ZIP code: 96746*)

2907. Ken Blenk (*ZIP code: 13068*)

I have been growing American Chestnuts for nearly 38 years.

I currently have a 400 tree orchard that produces over 100lbs of healthy American chestnuts the old fashioned way (in upstate New York). No GMO, no back crossing and totally organic. Over 30 genetic variances have been collected from the surviving trees in more than 15 of the US states and Canada throughout the past 3 decades. This gives my orchard a large gene pool to open pollinate with. I did not write against the GMO folks during the open period to USDA because I know them and how hard they have worked to create the transgenic tree even though I feel it could pollute the genome and eventually degrade the trees I have worked so diligently to breed. My trees get the blight, but many survive to reproduce and I use the newer progeny to replace any that do succumb. I feel each generation that has been exposed to the blight is more resistant to it. The whole concept is natural and based on survival of the fittest.

Many of the trees drop seed buried by animals and start new seedlings on their own.

Blue jays, crows and other birds carry seed to nearby farms where they drop seed that can help spread them farther out.

I sell a portion to Sheffield Seed company that is local, but highly regarded nationally.

They sold out in less than a week this year. I give them a good price to help get these high quality seed nuts distributed. I am currently searching for farmland close to my home to start another orchard with third and fourth generation (blight exposed) progeny. Check out the newspaper story 'Cortland Freeville man grows American Chestnuts the old fashioned way'. I would put my trees up against the GMO's any day and see which ones survive long term in the forest. Mine are grown against all mother nature has to offer. They have been set up nicely to make it on their own.

3023. Nanu Miah (*ZIP code: NW7 5T6*)

A157 ~

Do not alter nature, the original code of true nature

3024. Elizabeth O'Mara (*ZIP code: 14111*)

3025. Alexandra Moll (*ZIP code: 14221*)

3026. Anthony Jo (*ZIP code: S6H 7R9*)

The cult-like hubris and conceit of genetic engineers and their corporations is truly repulsive.

They don't care about the consequences, because if things go bad, that's good for disaster capitalism.

3027. Selina Yeung (ZIP code: 00000)
